NOTES

- 1) The carrier frequency is default. Increasing the carrier frequency requires a reduction in current. please refer to Pr. 06-55 Derating Protection drawing.
- 2) The AC motor drive should operate in derating current when its control method is set to FOC Sensorless, TQC+PG, TQC sensorless. PM+PG, PM sensorless. Please refer to Pr. 06-55 for more information.
- 3) Select the AC motor drive with capacity one grade larger for the impact load application.
- 4) The rated input current will be affected not only by Power Transformer and the connection of the reactors on input side, but also fluctuates with the impedance of power side.
- 5) For Frame A, B and C, Model VFDXXC43A is under IP20/NEMA1/UL TYPE1 protection level.
- 6) For Frame D and above, if the last character of the model is A then it is under IP20 protection level but the wiring terminal is under IP00 protection level;
- 7) if the last character of the model is E, it is under IP20/NEMA1/UL TYPE1 protection level.
