LED Indicators & Troubleshooting

There are two LED indicators on IFD6503. USB LED displays the working status of the USB interface; CAN LED displays the working status of the CAN interface.

USB LED

LED status	Indication	How to correct
OFF	The PC cannot identify IFD6503.	Install the driver.
Green light ON	Connection to USB is successful.	--
Green light flashing	USB data are communicating.	--

CAN LED

LED status	Indication	How to correct
OFF	Initialization of the CAN interface is successful.	--
Yellow light ON	1. CAN bus is initializing. 2. CAN bus is BUS-OFF. 3. Error in CAN bus.	1. The yellow light is ON because the CAN bus has not initialized when IFD6503 is plugged into the PC. The yellow light will be OFF when the initialization is completed. 2. The yellow light will flash when there are data communicating on the CAN bus. 3. When many errors occurring in the CAN bus, the CAN bus communication will be cut off, and the yellow light will be constantly ON.
Yellow light flashing	CAN data are communicating.	--
