After DVP04DA-S/DVP04DA-S2 is disconnected, Do NOT touch any terminals in a minute. Make sure that the ground terminal (①) on DVP04DA-S/DVP04DA-S2 is correctly grounded in order to prevent electromagnetic interference.

FR ↗ L'appareil DVP04DA-S/DVP04DA-S2 est un module OUVERT. Il doit être installé dans une armoire de protection (boîtier, armoire, etc.) sans dépose de poussière, d'humidité, de vibrations et hors d'atteinte des chocs électriques. La pose de l'appareil DVP04DA-S/DVP04DA-S2 dans l'armoire doit être protégée par un verrou de sécurité (par exemple, une clé ou un cadenas doivent être nécessaires pour ouvrir la protection).

FR ↗ Ne pas appliquer la tension secteur sur les bornes d'entrée/Sorties, ou l'appareil DVP04DA-S/DVP04DA-S2 pourra être endommagé. Merci de vérifier encore une fois le câblage avant la mise sous tension du DVP04DA-S/DVP04DA-S2. Lors de la déconnection de l'appareil, ne pas toucher les connecteurs dans la minute suivante. Vérifiez que la terre est bien reliée au connecteur de terre (①) afin d'éviter toute interférence électromagnétique.

## 1 Introduction

### Model Explanation & Peripherals

• Thank you for choosing the Delta DVP series PLC. A DVP-S/SX/SX/SC/SV series PLC can read data from DVP04DA-S/DVP04DA-S2 or write to DVP04DA-S/DVP04DA-S2 by means of the instruction FROMT0. The analog output module receives four pieces of 12-bit digital data from a PLC, and converts the digital data into 4-point analog signal output (voltage or current). There are 49 CRs (control registers) in the module, and each register has 16 bits.

• Users can select output from voltage or current via wiring. Voltage output range is 0V ~ +10VDC (resolution is 2.5mV). Current output range is 0mA~20mA (resolution is 5μA).
