## Troubleshooting

### Input LED Indicator

The On/Off of input signals can be indicated by the input LED indicator. When the input is On, the LED will be on. If error occurs, please check if the loops of the LED and input signal are normal by using HPP/WPLsoft. Please also be aware that:

- DO NOT place DVP08ST11N under direct sunlight and please avoid placing it next to overheating objects in case the high temperature will affect the functions of DVP08ST11N.
- Please clean the airborne or conductive dust on the panel on a regular basis.

EN DVP08ST11N is an OPEN-TYPE device. It should be installed in a control cabinet free of airborne dust, humidity, electric shock and vibration. To prevent non-maintenance staff from operating DVP08ST11N, or to prevent an accident from damaging DVP08ST11N, the control cabinet in which DVP08ST11N is installed should be equipped with a safeguard. For example, the control cabinet in which DVP08ST11N is installed can be unlocked with a special tool or key.

EN DO NOT connect AC power to any of I/O terminals, otherwise serious damage may occur. Please check all wiring again before DVP08ST11N is powered up. After DVP08ST11N is disconnected, Do NOT touch any terminals in a minute. Make sure that the ground terminal ④ on DVP08ST11N is correctly grounded in order to prevent electromagnetic interference.

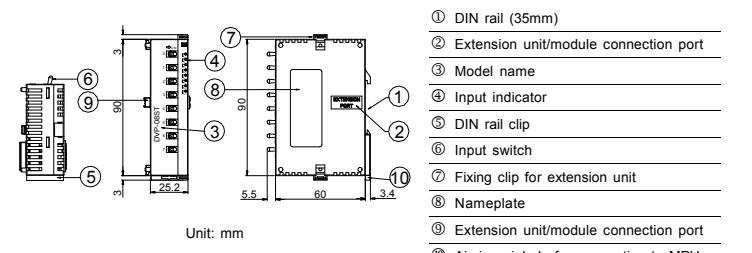

FR DVP08ST11N est un module OUVERT. Il doit être installé dans une enceinte protectrice (boîtier, armoire, etc.) saine, dépourvue de poussière, d'humidité, de vibrations et hors d'atteinte des chocs électriques. La protection doit éviter que les personnes non habilitées à la maintenance puissent accéder à l'appareil (par exemple, une clé ou un outil doivent être nécessaire pour ouvrir la protection).

FR Ne pas appliquer la tension secteur sur les bornes d'entrées/Sorties, ou l'appareil DVP08ST11N pourra être endommagé. Merci de vérifier encore une fois le câblage avant la mise sous tension du DVP08ST11N. Lors de la déconnection de l'appareil, ne pas toucher les connecteurs dans la minute suivante. Vérifier que la terre est bien reliée au connecteur de terre ④ afin d'éviter toute interférence électromagnétique.
