# 1.1 DIACloud Web Portal

This chapter introduces the operation methods of DIACloud Web Portal. DIACloud is an IoT cloud platform used for industrial automation monitoring and management. Users can access industrial site conditions at anytime and anywhere through the DIACloud Web Portal or mobile App, including collecting production data and monitoring machine and equipment status in real time.

## 1.2 Function Description

### 1.2.1 Environment Configuration

It is recommended to use the following browser to log in to the DIACloud web page

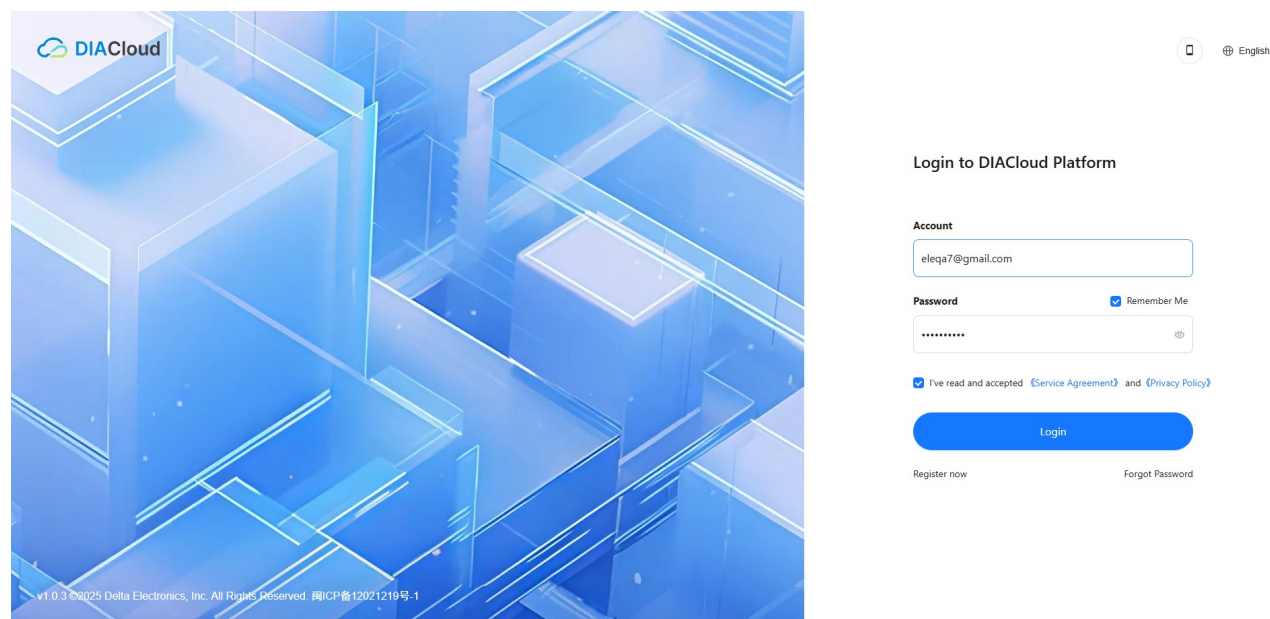

Browser	Version
Chrome	109 or above

### 1.2.2 Account Settings

You first need to register a DIACloud account at <https://hms.diacloudsolutions.com/> before using the DIACloud platform.

#### • Login

Enter the correct account and password on the login page and click Login to log in to the DIACloud cloud platform.

#### Notification

Click the icon  on the upper right corner to switch the display language.  
Support Simplified Chinese, English and Traditional Chinese.

- **Register**

Click **Register Now** button on the login page to jump to the registration page. You can choose to register by mobile phone or email. Register with Mobile phone is only for China area.

**1**

## Login to DIACloud Platform

### Account

### Password

☒ Remember Me☒ I've read and accepted [《Service Agreement》](#) and [《Privacy Policy》](#)[Forgot Password](#)

Fill in the registration information and click **Submit**.

[Register with Mobile](#)[Register with Email](#)

\* Email:

\* Password:

\* Confirm Password:

User Name:

Team Name:

\* Data Center:

☒ I've read and accepted [《Service Agreement》](#) and [《Privacy Policy》](#)

## • Forget Password

### Notification

1. The password should be 8-16 characters long and contain at least two or more of digits, letters or symbols.
2. If you use email to register, please go to your email to activate the account after submitting the registration.

Login to the webpage <https://hms.diacloudsolutions.com/> and click **Forget Password**.

The screenshot shows the DIACloud Platform login interface. A 'Reset password' modal is displayed in the foreground, containing the following fields:

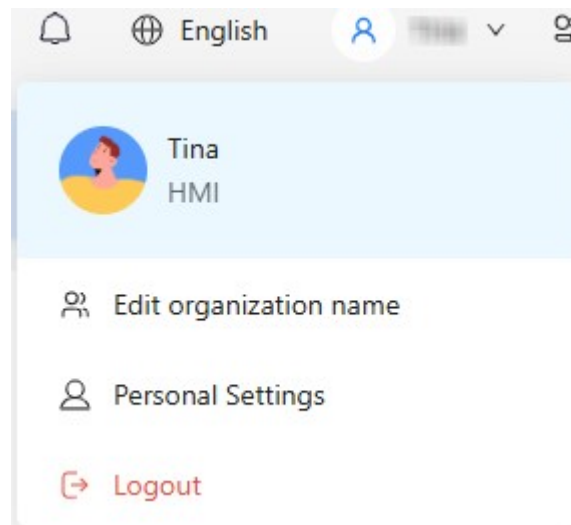

- \* Account: [Text input field]
- \* Verification Code: [Text input field] with a 'Send' button.
- \* New Password: [Text input field] with a visibility toggle icon.
- \* Confirm Password: [Text input field] with a visibility toggle icon.

At the bottom of the modal are 'Cancel' and 'OK' buttons. In the background, the login page is visible, featuring a 'Login' button, a 'Remember Me' checkbox, and a 'Forgot Password' link highlighted with a red box and a blue arrow pointing to a circled '1'.

## • Account Information

1. Support to view current account data center.
2. Support to view if there is any device failure under the current account.
3. Support to view if there are billing messages and system announcements under the current account.
4. Support to view account name, team name.
5. Support to edit team name for main account.
6. Support to logout from the account.
7. Support to change the platform language (Simplified Chinese, Traditional Chinese and English).

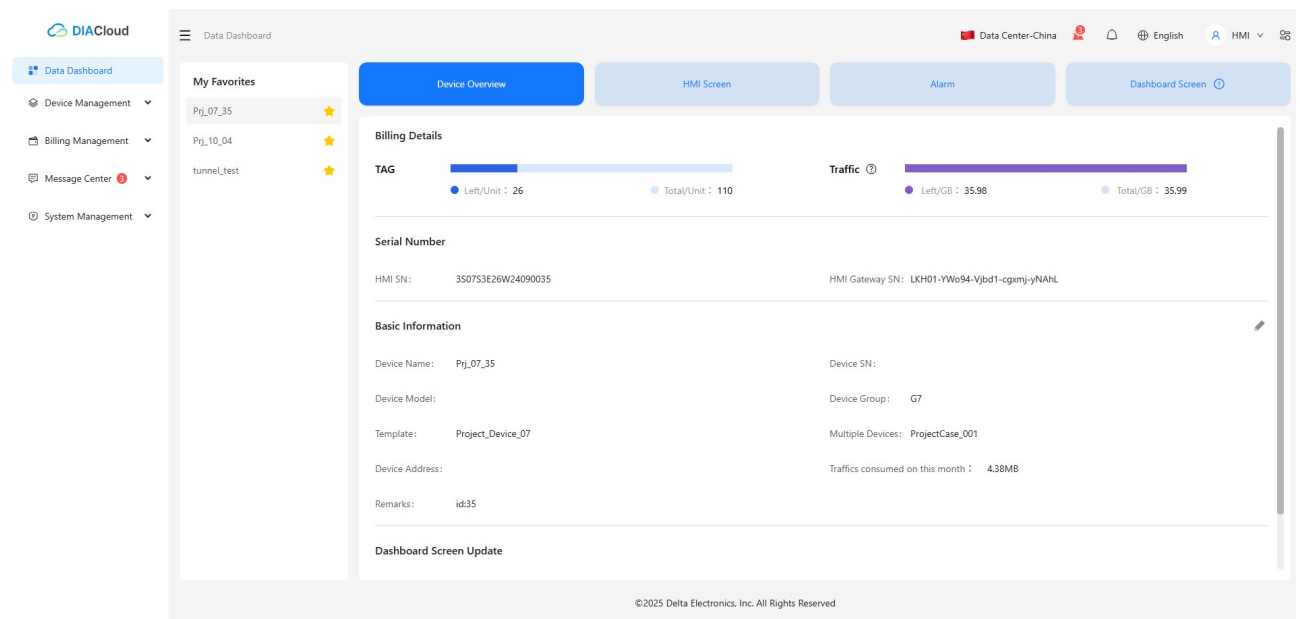

### 1.2.3 Data Dashboard

The data dashboard mainly displays the devices that the user has selected. Click the device to view device information, Alarm, TAG and traffic usage, remotely access the HMI screen and monitor the device status through the dashboard.

#### 1.2.3.1 Device Overview

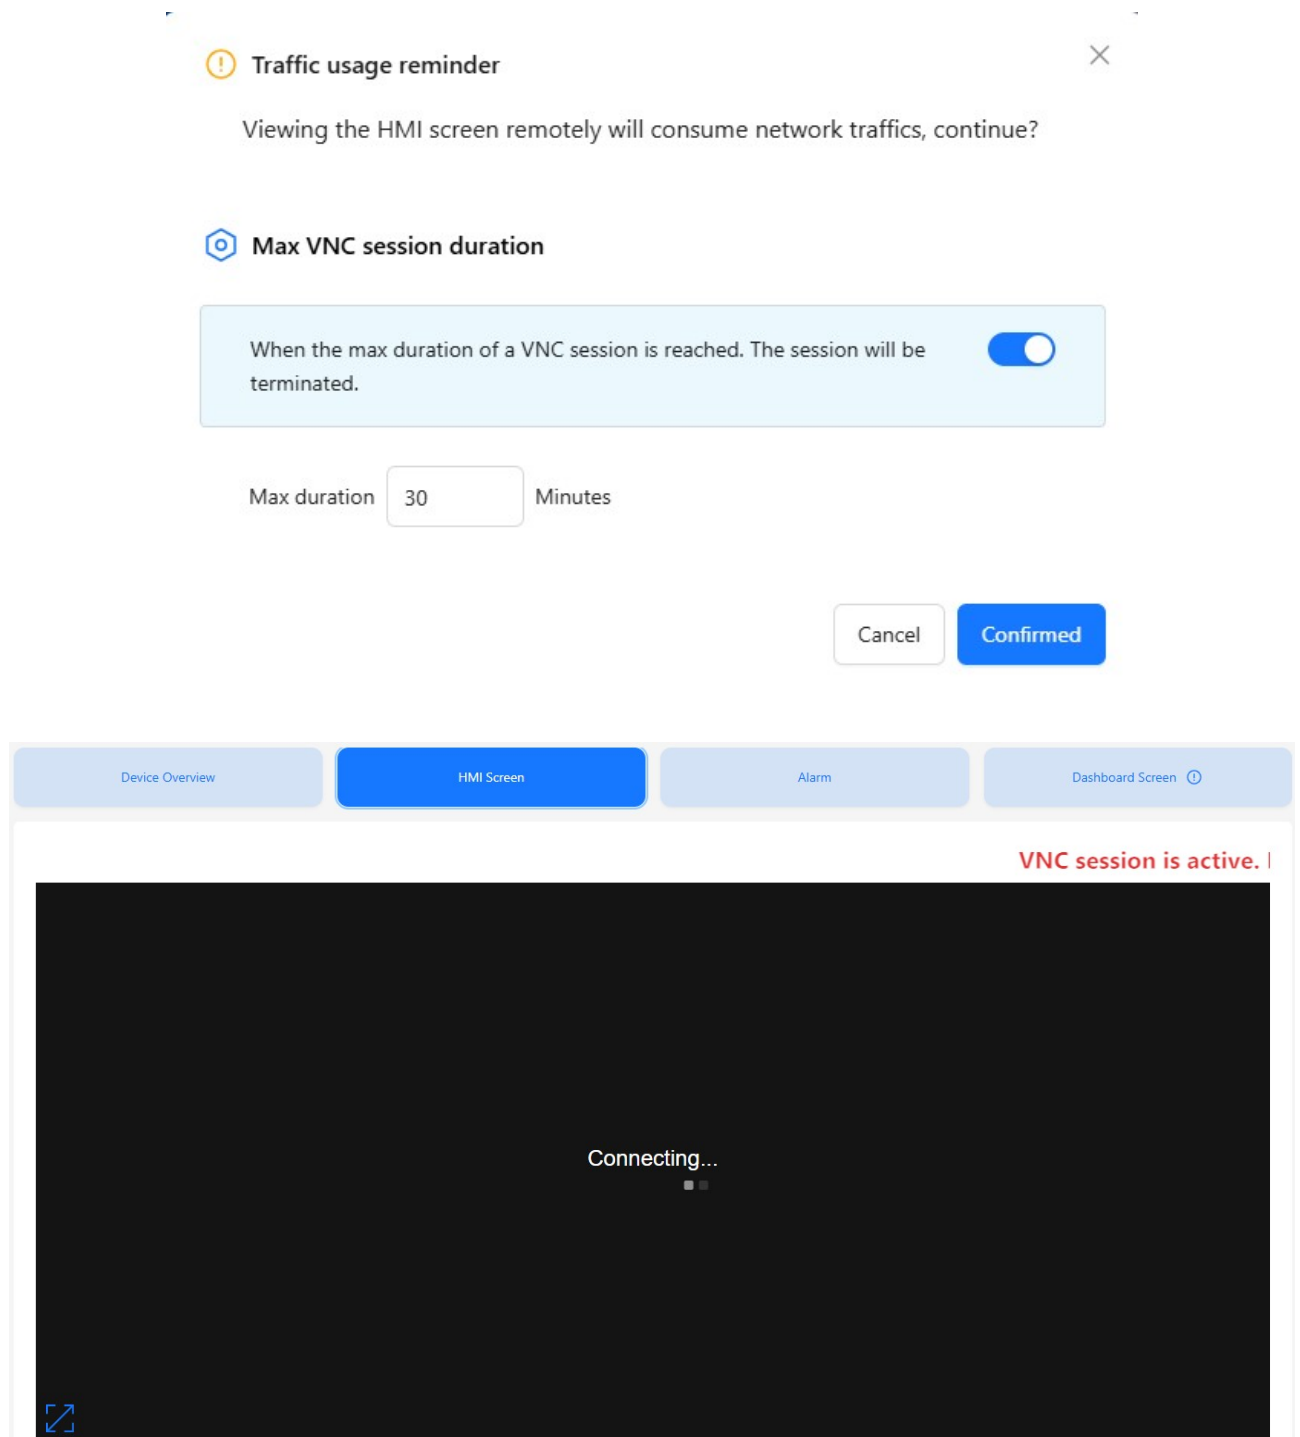

The device has completed binding the DAICloud account in eDIACloud and successfully connected to the Internet. This page shows all current information about the device.

Description	Default
<b>Billing Details</b>	
<ul style="list-style-type: none"> <li>● TAG: Count the total number of unexpired TAGs on the device and the number of used TAGs among the unexpired TAGs.</li> <li>● Traffic: Count the total unexpired traffic of the device and the used traffic in the unexpired traffic.</li> </ul>	0
<b>Serial Number</b>	
<ul style="list-style-type: none"> <li>● HMI SN: Display the serial number of the device.</li> <li>● HMI Gateway SN: Display the gateway serial number of the device.</li> </ul> <div> <div>Notification</div> <div>  <p>1. If the device is bound through the built-in License + HMI, the gateway SN will display the License SN.</p> <p>2. If the device is bound through Dongle + HMI, the gateway SN will display Dongle SN.</p> </div> </div>	N/A
<b>Basic Information</b>	
<p>It shows the information that the device is bound to DIACloud.</p> <p> : Modify device binding information. After completing the modification, click  to save the settings and click  to cancel the changes.</p> <ul style="list-style-type: none"> <li>● Device Name: The name of the device bound to DIACloud.</li> <li>● Device SN: The device serial number that the device is bound to DIACloud.</li> <li>● Device Model: The model of the device bound to DIACloud.</li> <li>● Device Group: The group name of the device bound to DIACloud.</li> <li>● Template: The template name of the device bound to DIACloud.</li> <li>● Multiple Devices: The name of the multiple devices bound to DIACloud.</li> <li>● Device Address: This shows the detailed address of the device.</li> <li>● Traffics consumed on this month: Displays information about the traffic consumed this month.</li> </ul>	N/A
<b>Configuration Update</b>	
<ul style="list-style-type: none"> <li>● Configuration creation: Display the first binding time of the device.</li> <li>● Configuration modification: Display the first modification time of the device.</li> <li>●  Configuration design: Editing device configurations</li> </ul> <div> <div>Notification</div> <div>  <p>To edit device configuration, please download and install DIAWebDesigner first.</p> </div> </div>	N/A

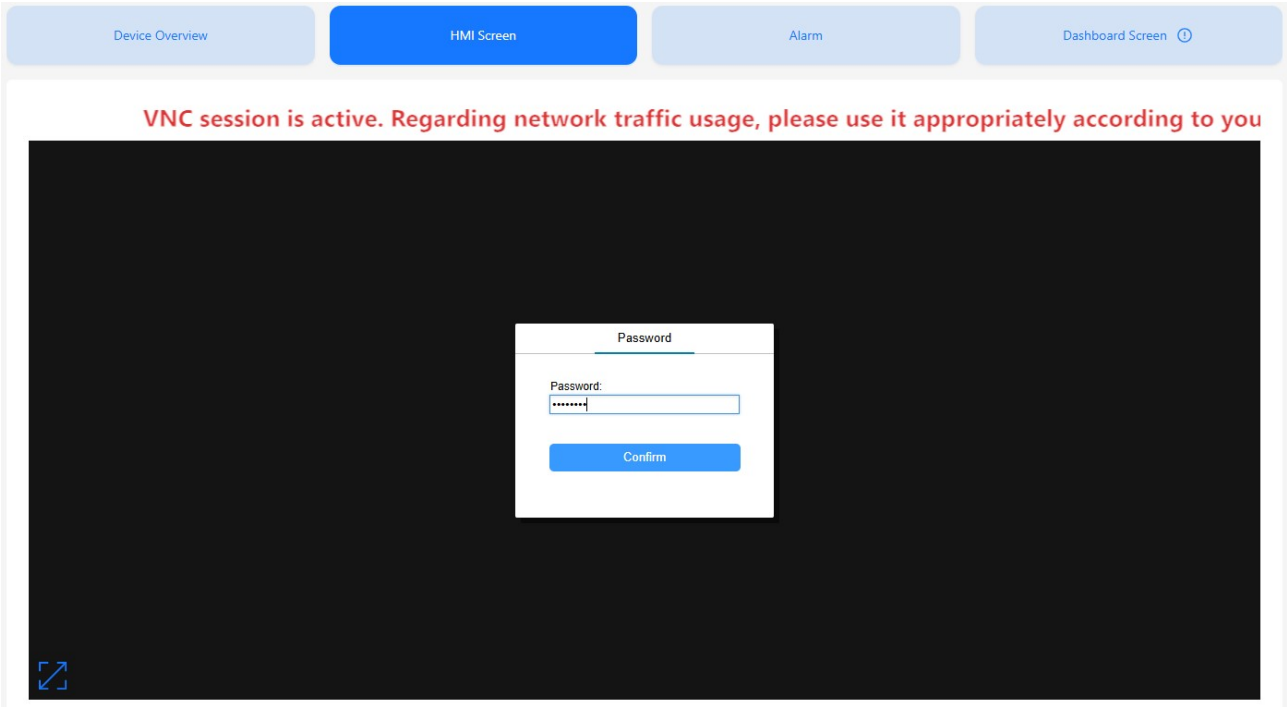

### 1.2.3.2 HMI Screen

Through the VNC function of HMI, the screen of the HMI machine can be displayed on the web and directly operated. Device traffic is required when viewing the HMI screen. You can configure the viewing time through the setting screen to avoid wasting traffic.

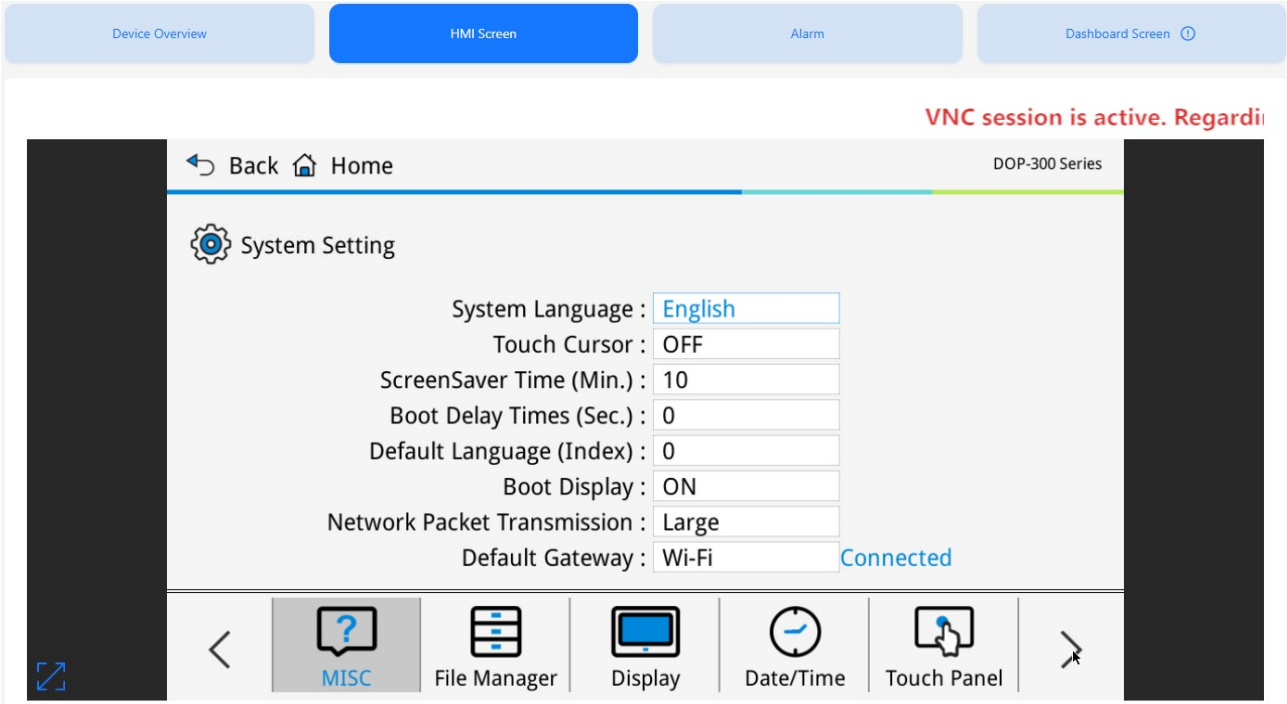

Password window will pop up, enter the VNC password and click **confirm**.

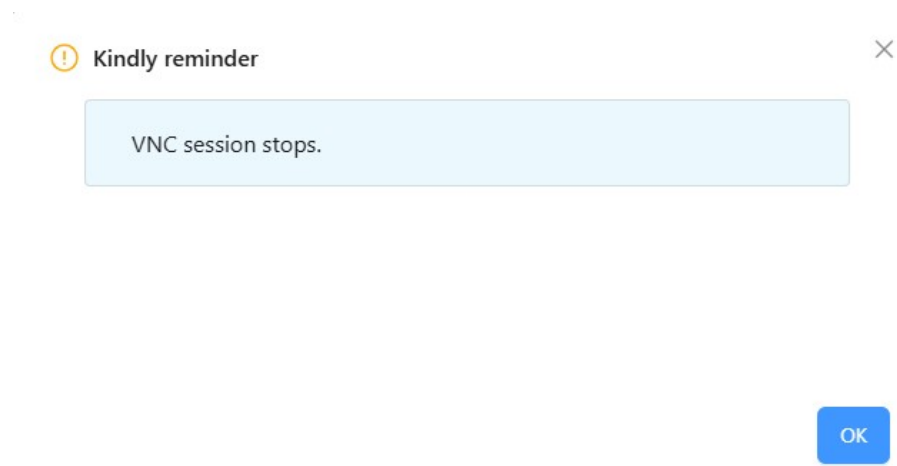

1

After the connection is successful, the current screen of the device will be displayed on the screen.

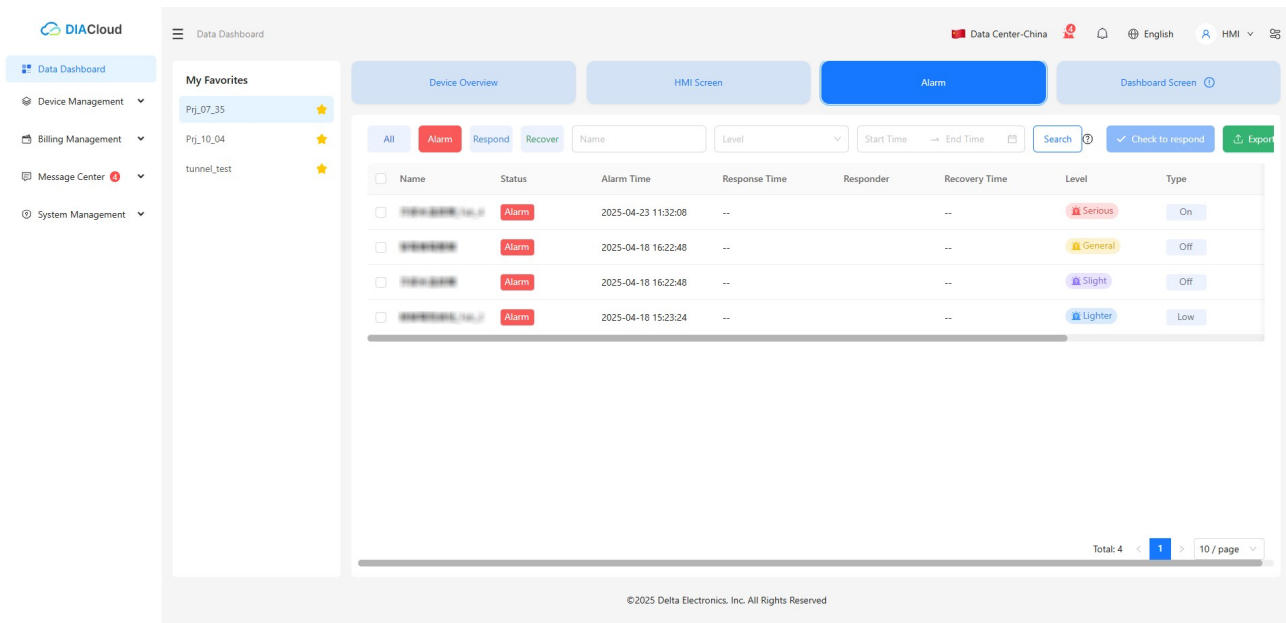

Note: Before using this function, please make sure that the VNC function is turned on. For related settings, please refer to DOP manuals. When closed manually (switching to other pages) or automatically closed (viewing duration enabled), the VNC connection ends.

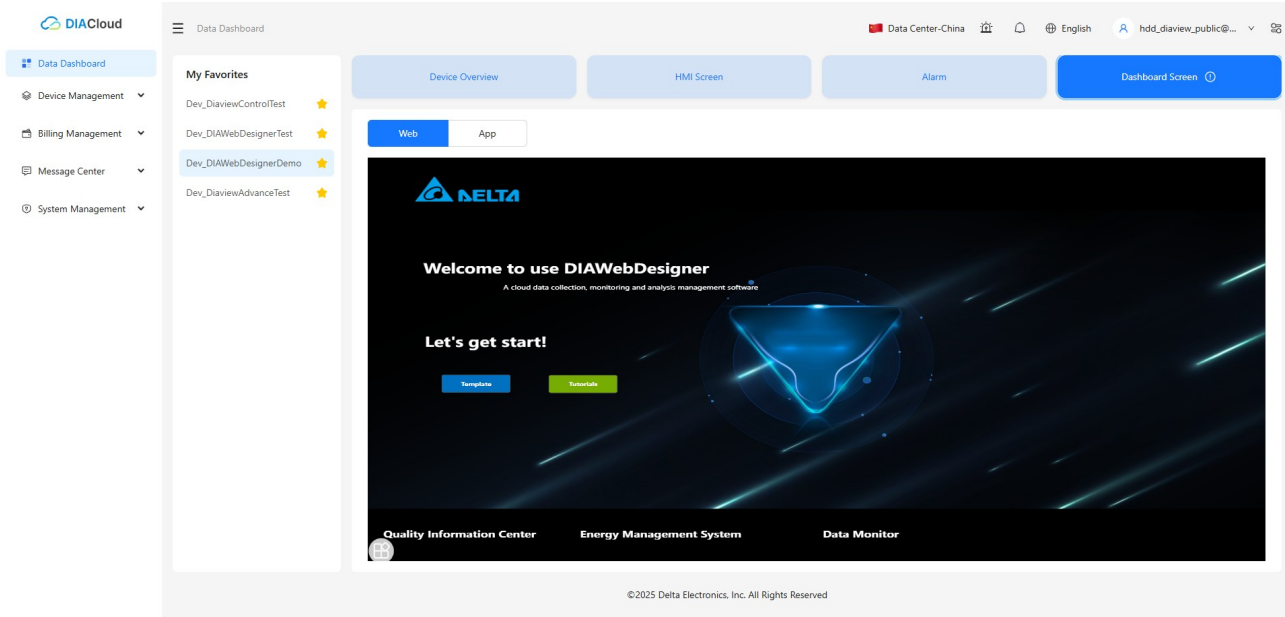

1.2.3.3 Alarm

The Alarms page in the Data Dashboard displays the alarm history associated with the currently bookmarked device. If the device has a previous alarm history, the alarm history is displayed here and in the Message Center.

1.2.3.4 Dashboard Screen

Dashboard Screen displays the HMI device configuration screen in the template bound to DIACloud.

Note: The dashboard screen editing software is DIAWebDesigner. For detailed operations, please refer to the [DIAWebDesigner operation manual](#).

1.2.4 Device Management

There are four item in the device management: Device List, Device Groups, Single Device and Multiple Devices.

1.2.4.1 Device List

In the device list, you can find the login DIACloud account and the related device information.

Search		
Enter the corresponding device information to quickly find the correct device.		N/A

1.2.4.2 Device Groups

Displays the groups created by the user and their grouping devices. The left side is a list of all groups, and the right side is the group's devices.

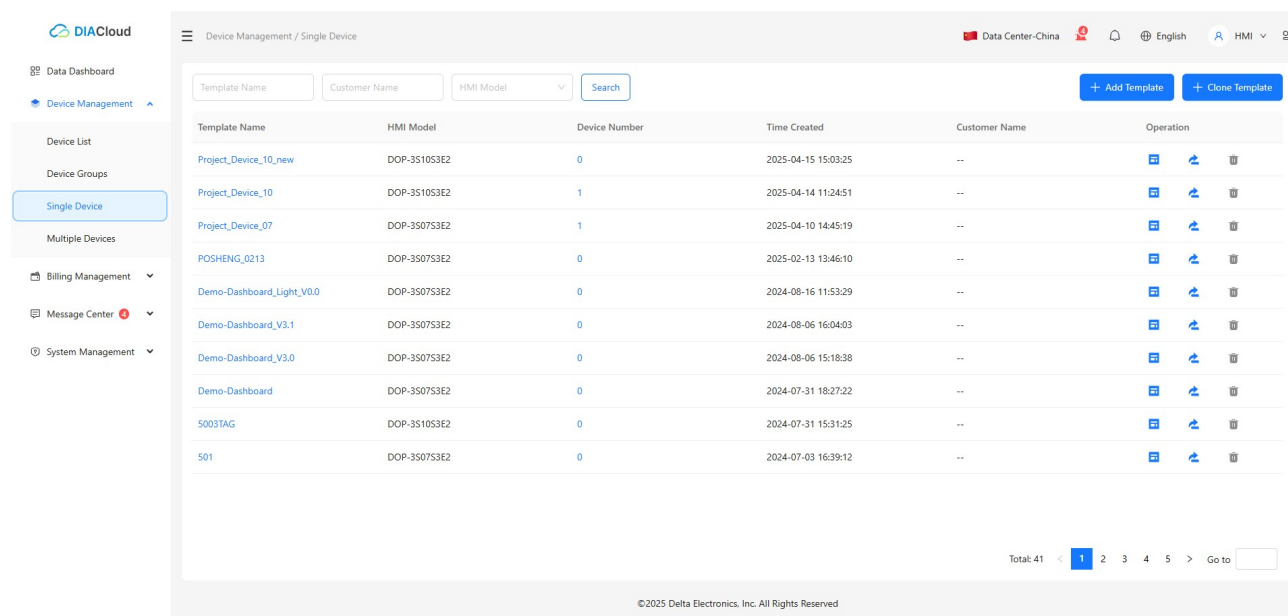

Description	Default
<b>Device Group</b>	
<p>Display all device group names of DIACloud accounts.</p> <p>Right-click on the default group to add the group or set privileges.</p> 	Default grouping
<p>Right-click on the group name to support adding, deleting, and modifying the group or set privileges. The group level is up to eight levels, that is, each group has up to seven sub-group levels.</p>	

Description	Default
	
<b>Device Name</b>	
Display the name of the device bound to DIACloud.	N/A
<b>Device SN</b>	
Display the device serial number of the device.	N/A
<b>Device Model</b>	
Display the product model of the device.	N/A
<b>Operation</b>	
<p>Move device to group: Modify the group of devices.</p> 	N/A

### 1.2.4.3 Single Device

Template list displays all templates created by the user's DIACloud account. Users can use the template function to upload device-related data, including TAGs, screens, projects, etc., to the corresponding template, and the HMI then synchronizes the cloud template to complete the configuration or update of related information.

Description	Default
<b>Template Name</b>	
Displays the name of this template.	N/A
<b>HMI Model</b>	
Displays the device model which this template applies.	N/A
<div>  <p>Notification</p> <p>When a device is added to a template, the device model must be consistent with the model before it can be added.</p> </div>	
<b>Device Number</b>	
Displays the number of devices bound to this template. Click the quantity to jump to the device list and automatically filter out the template.	0
<b>Time Created</b>	
Displays the time that the template is created	N/A
<b>Customer Name</b>	
Display the customer's name set by this template	N/A

1.2.6 Message Center

1.2.6.1 Alarm Records

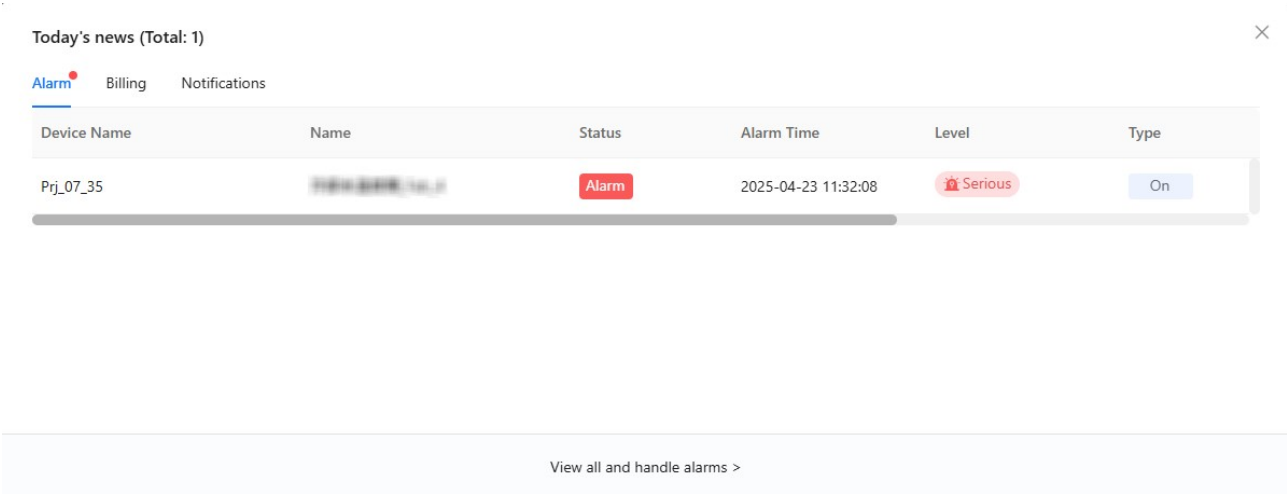

Alarm records displays all the alarm messages of the current device, users can batch/full acknowledge and recovery alarms from this page. Users can also query alarm time, device name/alarm name, and level. Alarm records can also be exported in .xlsx file format.

1.2.6.2 Billing Message

1.2.6.2.1 Message pop-up windows

Users log in to the DIACloud platform and are populated with device alarm that occurred today, push billing messages, and system notifications that were pushed today.

[All Read]: Mark all unread messages today as read.

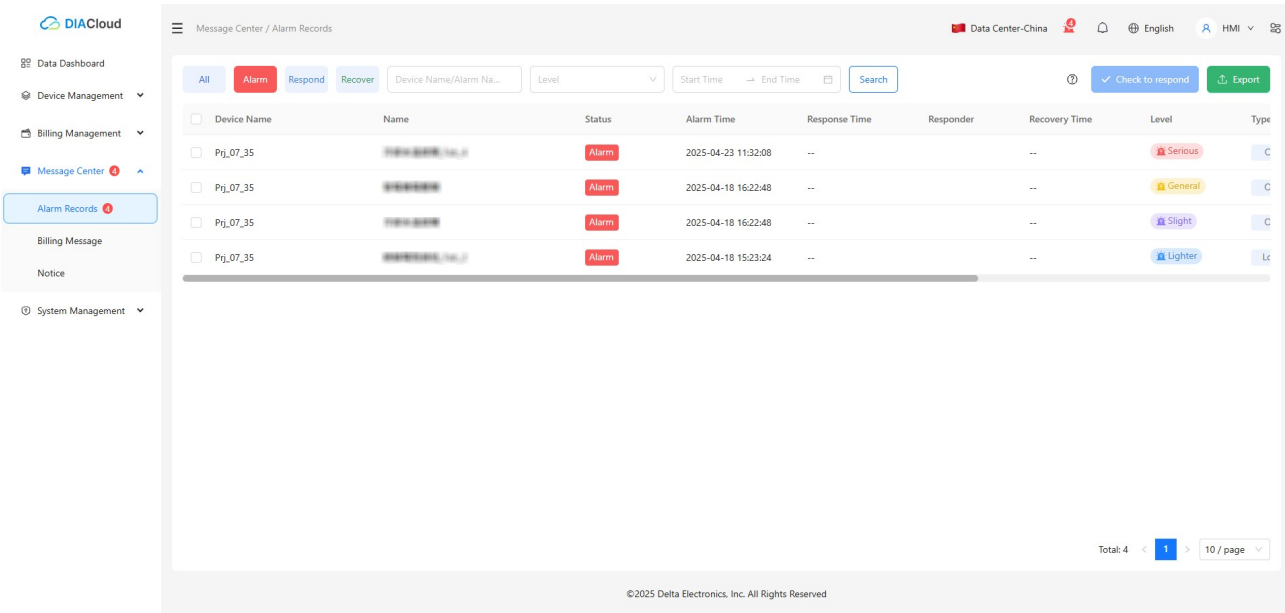

[View All]: Jump to the list of billing messages to view all information.

Click the icon  to read a single message.

Alarm tab:

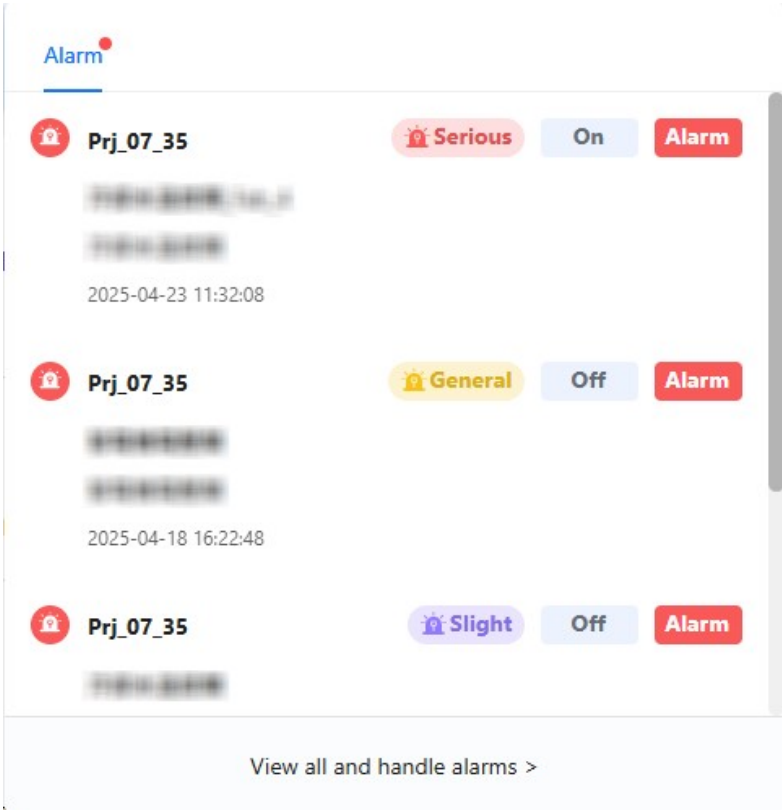

Today's alarms are displayed. Users can also click View All and Handle Alarms at the bottom of the page, and the page will jump to the alarm records after you click on it.

1

1.2.6.2.2 Alarm Notifications

Mouse over the alarm notification icon in the upper-right corner  to show all outstanding alarms.

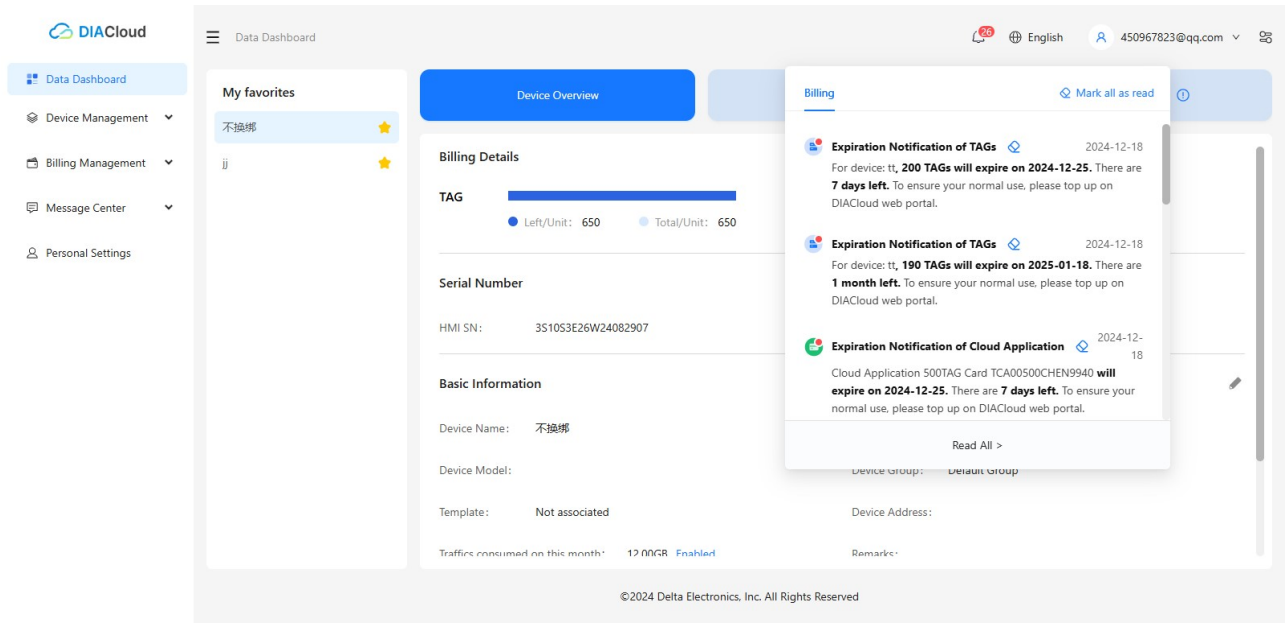

### 1.2.6.2.3 Notification

Mouse over the notification icon  in the upper right corner to display all unread messages.

[Read All]: Marks all unread billing messages under this account as read.

[View All]: Jump to the list of billing messages to view all the information.

Tap the message type icon  to read a single message.

### 1.2.6.2.4 Message List

Add menu [Message Center - Billing Messages] to show all unread messages.

Users can enter the billing message interface, view all unread messages by default, and switch to [All] to view all billing messages of this account.

Users can filter messages by message type (multiple choices), device name, card number, and time.

Read All]: Marks all unread billing messages under this account as read.

The message list can be categorized into the following message types:

#### 1. Remote Access expiration reminder

- (1) When Remote Access expires, a reminder will be sent to the recharged account.
- (2) Reminder rules: Send one reminder each one month / 7 days / 1 day / the same day in advance.

#### 2. Cloud Application card expiration reminder

- (1) When Cloud Application expires, send a reminder to the recharge account.
- (2) Reminder rule: Send a reminder once a month / 7 days / 1 day / the same day.

#### 3. Equipment TAG expiration reminder

- (1) When the device TAG expires, a reminder will be sent to the currently bound account of the device.
- (2) Reminder rule: Send a reminder once a month / 7 days / 1 day / the same day.

#### 4. Reminders for insufficient device traffic

- (1) Reminder will be sent to the current bonded account of the device when the device traffic is insufficient.
- (2) Reminder rule: Reminder will be sent once when there is 100M / 50M / 0M left.

5. Account Tag Insufficiency Reminder

- (1) When the account tag is insufficient, send an expiration reminder to the rechargeable account.
- (2) Reminder rule: send a reminder once for each of the remaining 100, 50, and 0 quantites.

### 1.2.7.2 User Management

The main account can invite sub-accounts, assign sub-account privileges and data privileges, or move sub-accounts out of the team

When inviting users, please make sure that both of the following actions have been completed.

- ✓ The user you want to invite is in the same team name and the same data center
- ✓ The role name has been created for the main account.

## Invitation Notification

**eleqa7@gmail.com** invites you to join organization **HMI-Test\_Team**

- If there are existing devices, templates, top-up points in your account, it's suggested to join the organization with a new account.
- If there are history data in the account, the data should be cleared manually (unbind devices, remove templates) before join a new organization. The data removed is not recoverable.
- The top-up cards and top-up records won't be cleared, but the existing top-up cards won't be migrated to the new organization and there is no visible recharge record and no recharge records can be seen.
- If the data is cleared, the TAGs and traffic quota already allocated will remain valid.
- After join the organization, the privilege of the account will be set by the main account.
- If needed, the invitation need to be re-initiated after it's declined.

Decline the invitation

Accept and login again

### 邀请通知

**eleqa7@gmail.com** 邀请您加入团队 **HMI-Test\_Team**

若您账号上存在设备、模板、计费卡等信息，建议您注册新的账号加入团队  
账号下如有数据，需手动清空数据（解绑设备、删除模板）后方可加入团队，且数据不可恢复  
计费卡以及充值记录不会被清除，但个人充值卡无法带入到团队账号下并看不见充值记录  
清空数据之后，不影响已分配出去的TAG和流量  
成功加入团队后，账号权限将由主账号分配  
拒绝邀请后，如需再次加入该团队，可请邀请人重新发起邀请

### Invitation Notification

**eleqa7@gmail.com** invites you to join organization **HMI-Test\_Team**

If there are existing devices, templates, top-up points in your account, it's suggested to join the organization with a new account  
If there are history data in the account, the data should be cleared manually (unbind devices, remove templates) before join a new organization. The data removed is not recoverable.  
The top-up cards and top-up records won't be cleared, but the existing top-up cards won't be migrated to the new organization and there is no visible recharge record.  
If the data is cleared, the TAGs and traffic quota already allocated will remain valid.  
After join the organization, the privilege of the account will be set by the main account.  
If needed, the invitation need to be re-initiated after it's declined.

When inviting users, the account can be either a mailbox or a cell phone number. The system will automatically determine if the user has been added to the same team. If the user is in the same team, when clicking on the character name, the character name created by the main account will be displayed.

## 2.1 eDIACloud App Introduction

After the user logs in to the DIACloud account, eDIACloud not only can synchronize all device information of DIACloud, including device information, HMI screen, tag and other data, but also can bind the device to DIACloud through eDIACloud.

User only needs to download and install the APP (<https://hms.diacloudsolutions.com>) on their mobile devices to experience the flexible and convenient features and instant message reception, which can effectively improve remote monitoring, shorten troubleshooting time, and reduce labor maintenance costs.

### 2.1.1 Installation Environment/Software Installation

The mobile device software can be downloaded and installed by searching for “DIACloud” in Android Google Play and iPhone App Store.

Users can also scan the QRCODE and select your mobile device as iOS or Android and download the APP directly.

The Android and iPhone OS version supported by the APP are as demonstrated below:

- **Supported OS version**

Mobile	OS version
Android	Android 8.0 or above
iPhone	iOS11 or above

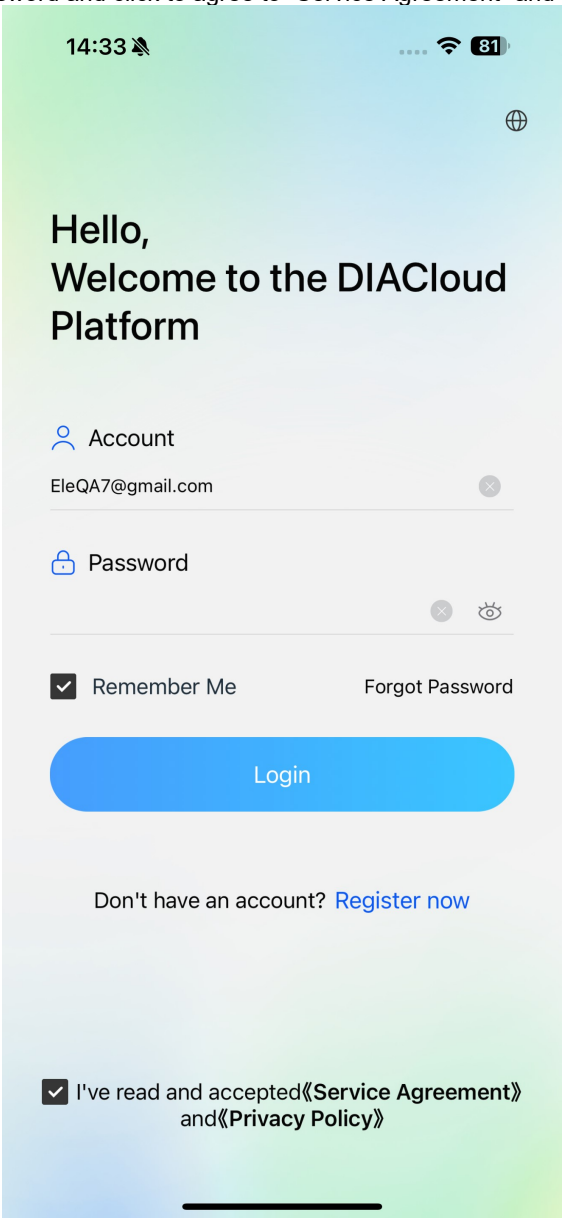

- **Download methods**

Region	Download platform
China	Google Play or APP Store
EMEA / India	Google Play or APP Store

2.2 Login Page

2.2.1 Login

- 1. After downloading and installing the APP, click the APP icon  and open eDIACloud.
- 2. Enter DIACloud username, password and click to agree to “Service Agreement” and “Privacy Policy” to log in.

Description	Default
<b>Account</b>	
Enter DIACloud account	N/A
<b>Password</b>	
Enter DIACloud password	N/A
<b>Remember Password</b>	

2

Description	Default
<ul style="list-style-type: none"><li>● Not checked: Account password will not be recorded.</li><li>● Checked: The account password will be recorded even if the user logs out.</li></ul>	Not checked
<b>I've read and accepted.</b>	
Before logging in, you must check and agree to the <b>I've read and accepted Service Agreement and Privacy Policy</b> before you can log in to the APP.	Not checked

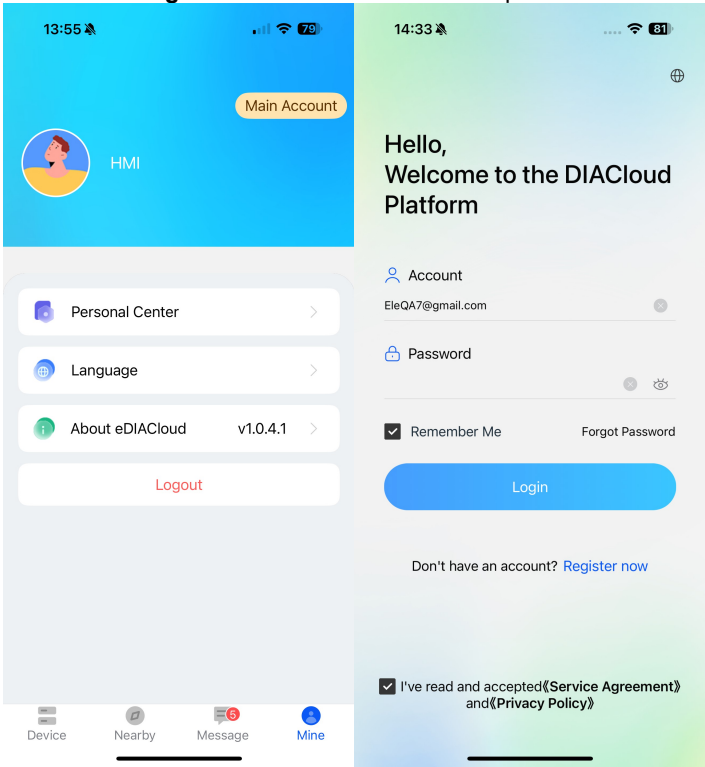

**Notification**

After logging out of your account, you will not be able to receive push notification.

2.2.2 Logout

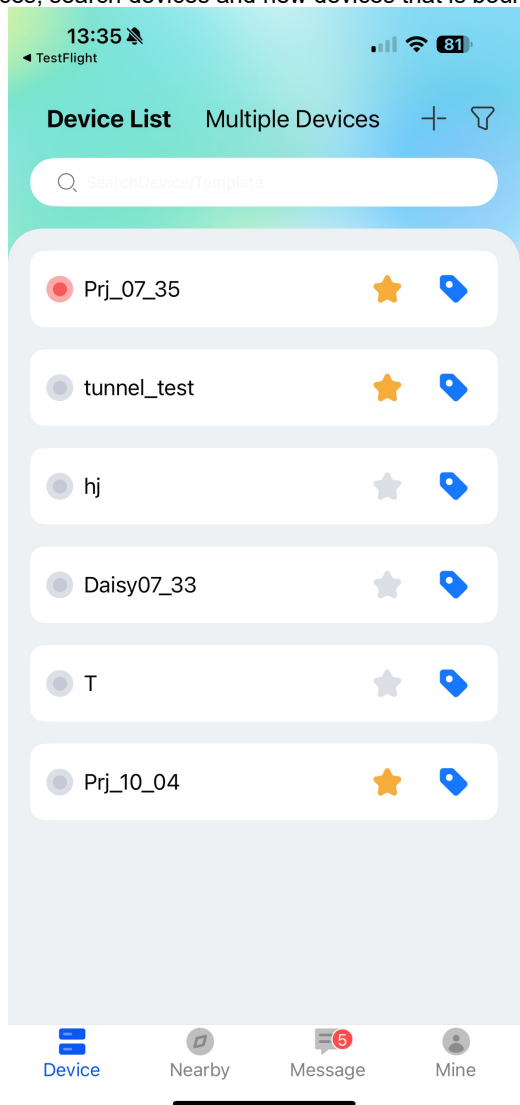

After logging into the APP, click **Mine > Logout** on the menu below to complete the account logout.

## 2.3 Function Operation

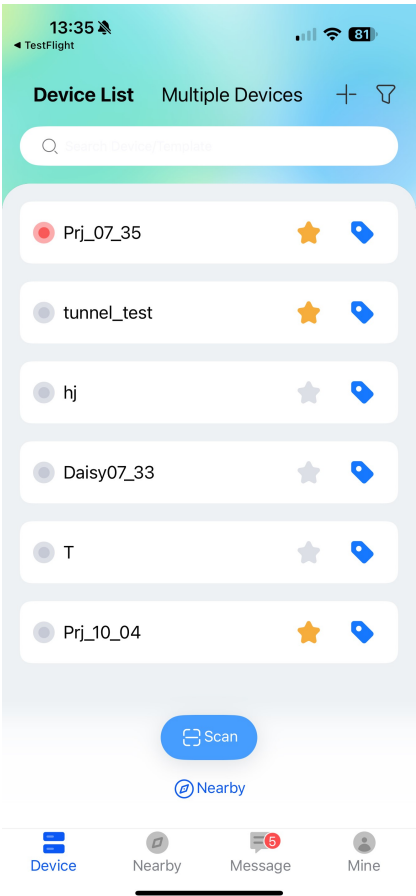

### 2.3.1 Homepage

Display the device list, multiple devices, search devices and new devices that is bound to DIACloud users.

Click on the upper right icon  to bind DIACloud to the device by scanning the device QRCode or Bluetooth device.

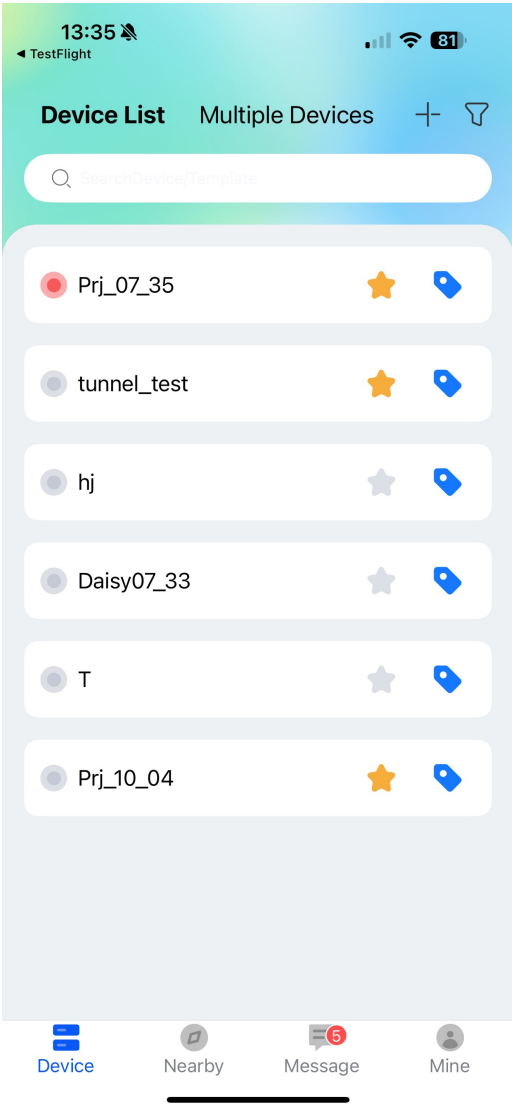

2

Description	Default
<b>Scan</b>	
<p>Scan the QRCode of the HMI to bind.</p>	N/A
<b>Nearby</b>	
Search nearby devices via Bluetooth and bind them.	N/A

2.3.2 Device List

Display the list of devices currently bound to DIACloud, including connection status, device information, screens and dashboards.

Description	Default
Device Status	
 : The device status is online.	N/A
 : The device status is offline.	
 : The device is abnormal, there is an alarm record status.	
Device Name	
Display the name of the device bound to DIACloud.	N/A
 : Included in My Favorite list.	
 : Not included in My Favorite list.	

Description	Default
 : Added device label. If the device does not have a device label set, user can define their own device label, which can be used when searching for devices.

## ● HMI Screen

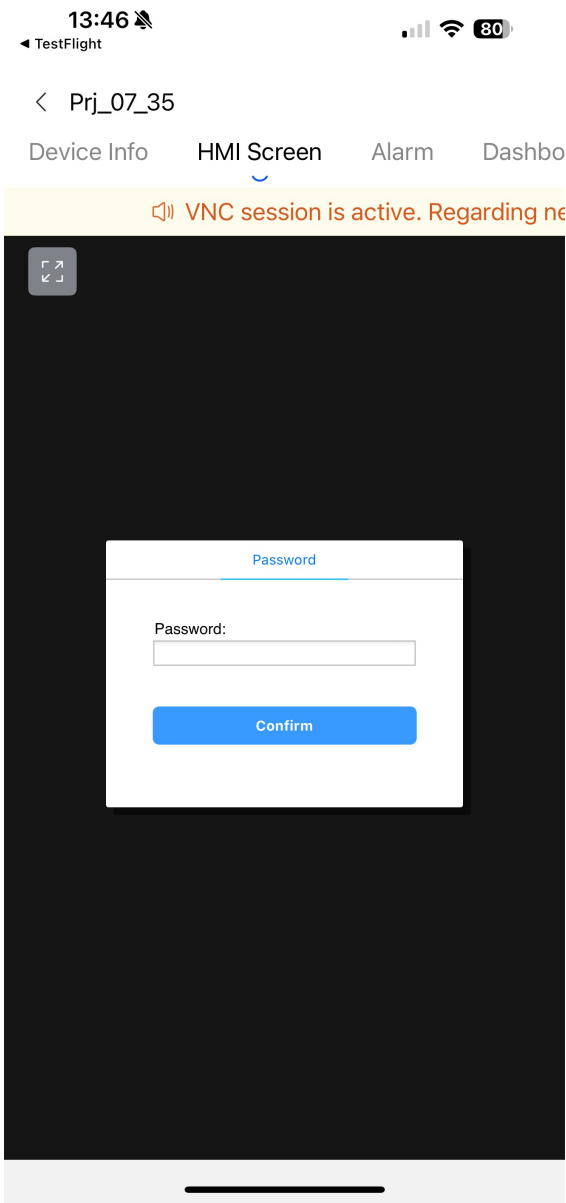

Through the VNC function, the screen of the actual HMI can be displayed on the handheld device and can be operated directly.

Click on the HMI screen, and the message “**Traffic usage reminder**”... will appear at first.

2

Select whether to turn off VNC automatically and set the time limit, press OK, the password window will appear, then enter the VNC password and click “Confirm”.

After the connection is successful, the current screen of the device will be displayed on the screen.

2

Note: Before using this function, please make sure that the VNC function is turned on on the HMI. For related settings, please refer to [DOP related manuals](#).

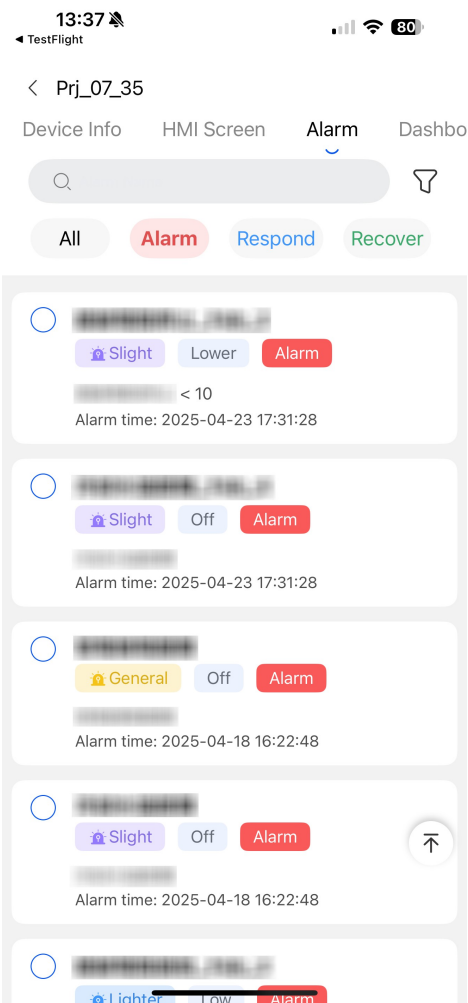

After successful connection, the current screen of HMI will be displayed. After leaving VNC, the following message will be displayed to remind the end of VNC usage.

- **Alarm**

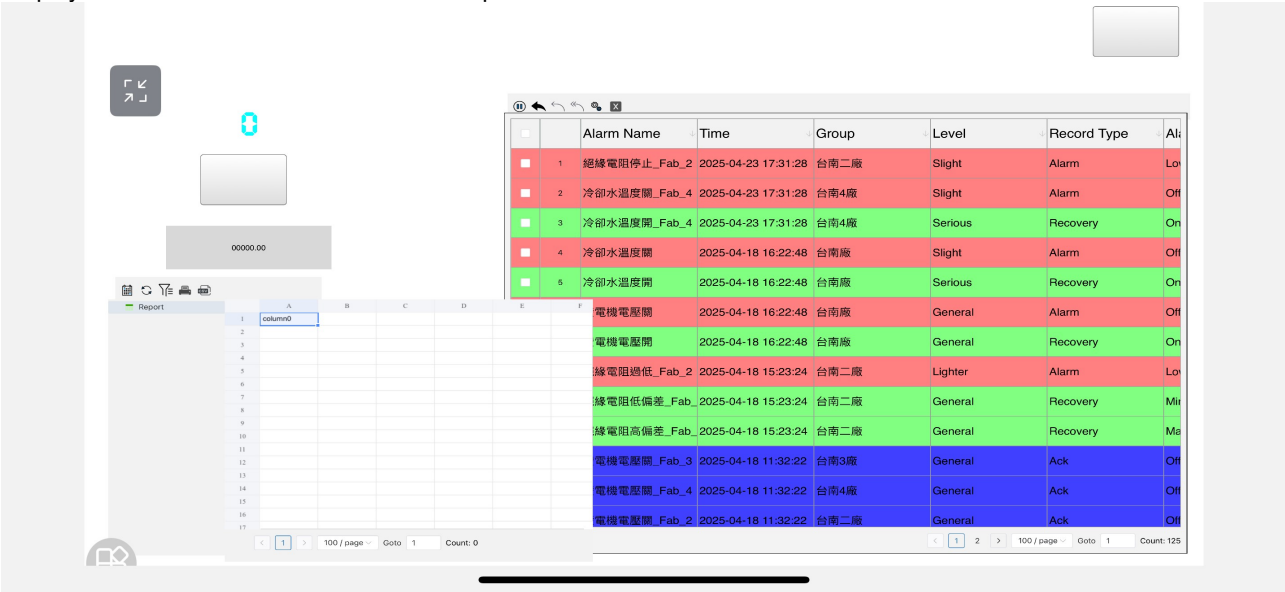

Displays the alarm records of the device. The alarm status can be confirmed and resumed in batch.

2

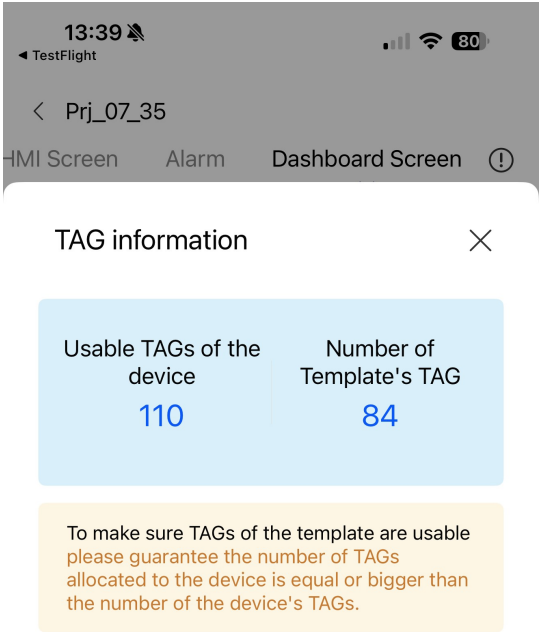

● Dashboard Screen

Display the HMI dashboard screen in the template bound to DIACloud.

Click  to view the number of TAGs used on the current configuration screen.

2

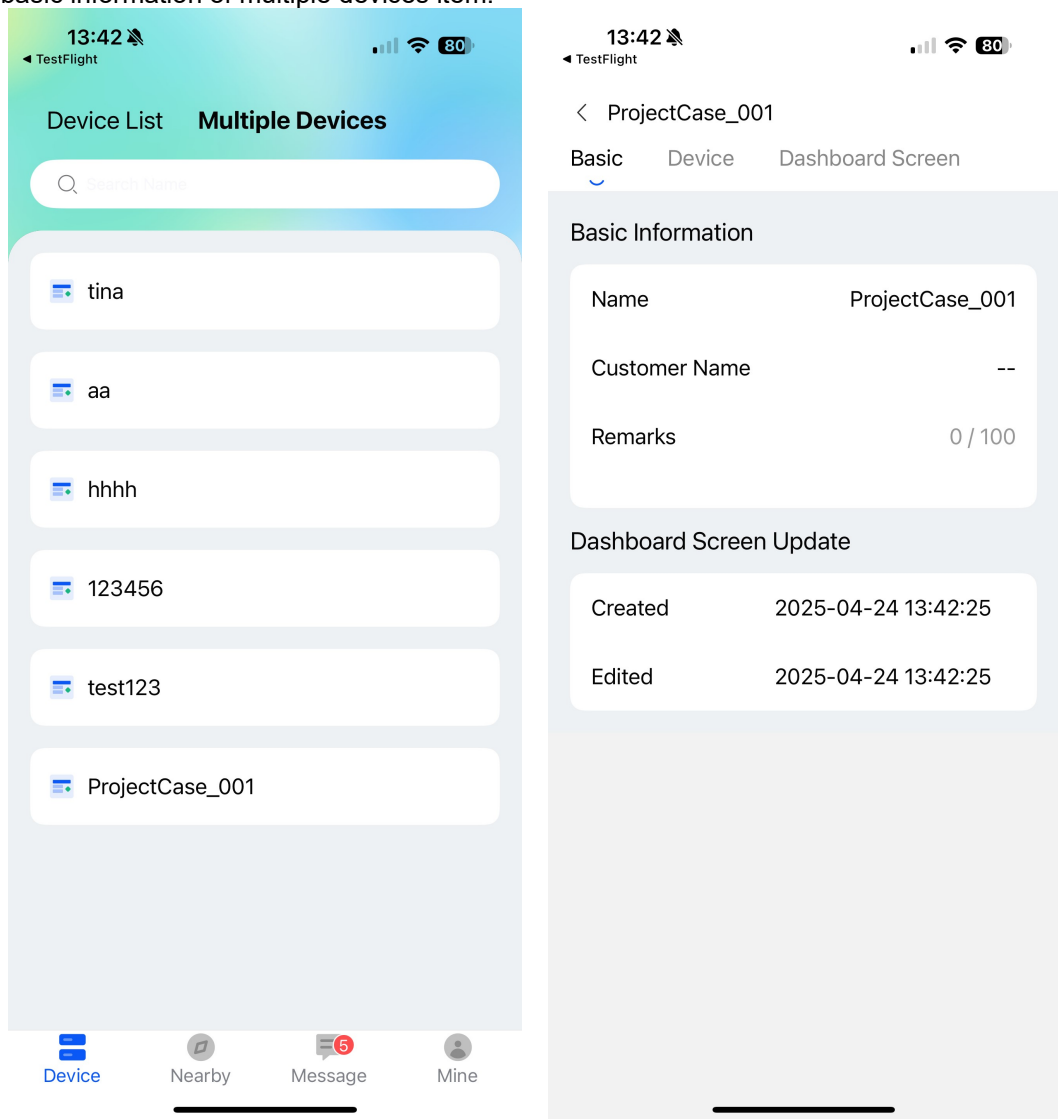

Click the icon  in the left corner to configure the appropriate language and aspect ratio based on your usage habits and mobile device screen size.

2.3.3 Multiple Devices

View the basic information of multiple devices item.

- View devices with templates on the associated platform and mobile configuration screens uploaded in DIAWebDesigner.

### 2.3.4 Nearby

This interface scans nearby Wi-Fi devices via Bluetooth.

Click "Nearby Devices" to jump to the "Nearby Devices" navigation search page.

[Nearby devices] Search Wi-Fi Dongle through Bluetooth, read HMI information through Wi-Fi Dongle, select Dongle + HMI or License + HMI to bind to the account, the operation steps are as follows:

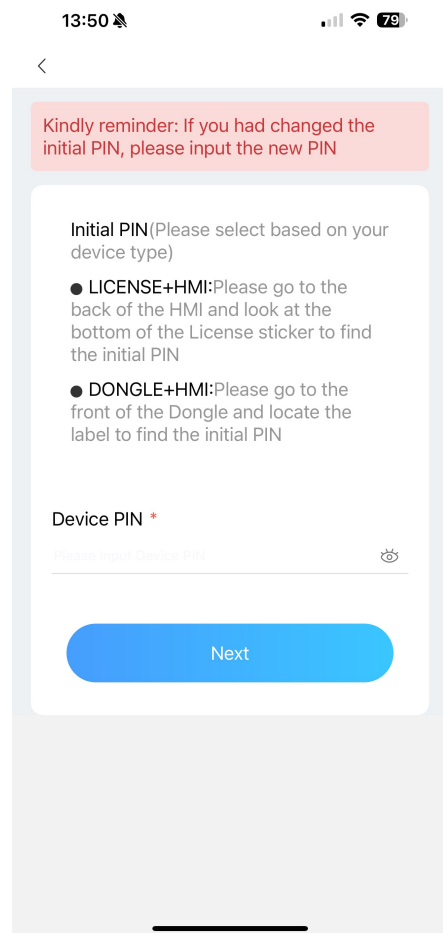

- Step 1. Power on the Dongle and configure the network such as Wi-Fi and turn on Bluetooth on the phone.
- Step 2. Find the Dongle via Bluetooth, click "Details", and the page will prompt you to enter the Dongle's PIN.
- Step 3. If the HMI is DOP300S, the page prompts the user to choose one of the two, bind the account with License + HMI or bind the account with Dongle + HMI.
- Step 4. Select any method in Step 3 and jump to the device information filling page in Step 4. Click "OK" and the HMI is successfully bound to the account. (through the method selected in Step 3)

After scanning the device, click Detail and enter the pin to bind device.

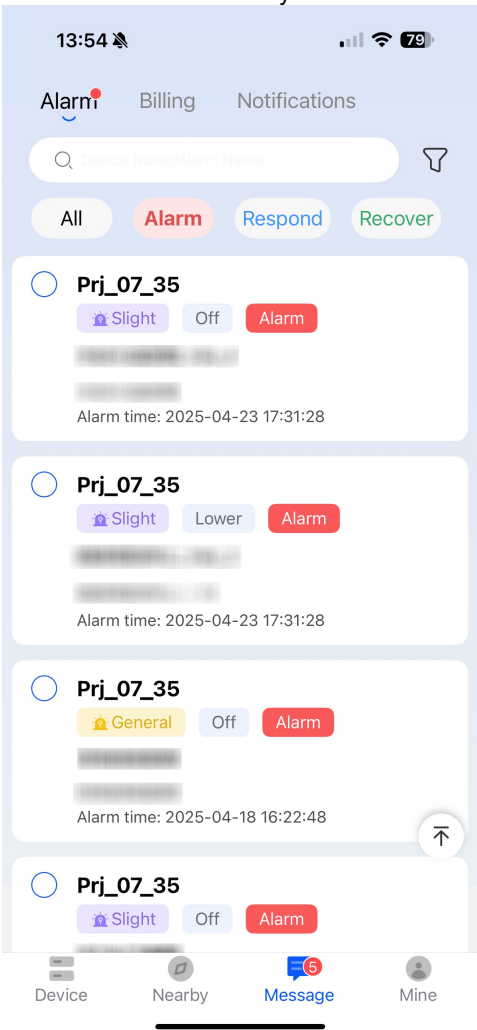

2.3.5 Message

2.3.5.1 Alarm

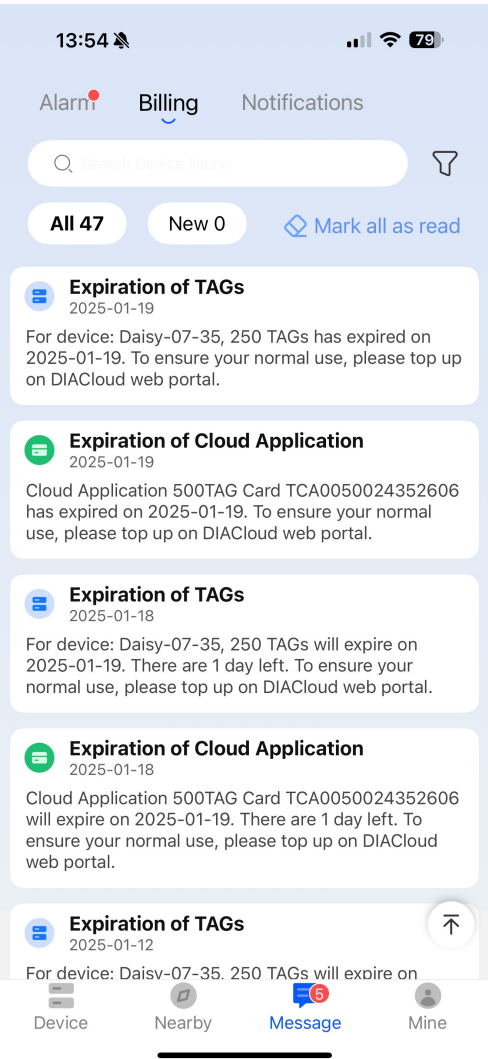

Displays all alarms and supports batch confirmation and recovery.

2.3.5.2 Billing

Add menu [Message-Billing] to show all unread messages.  
Users can enter the billing message interface, view all unread messages by default, and switch to [All] to view all billing messages of this account.  
Users can filter messages by message type (multiple choices), device name, card number, and time.  
Tap [Read All]: Mark all unread billing messages under this account as read.

2

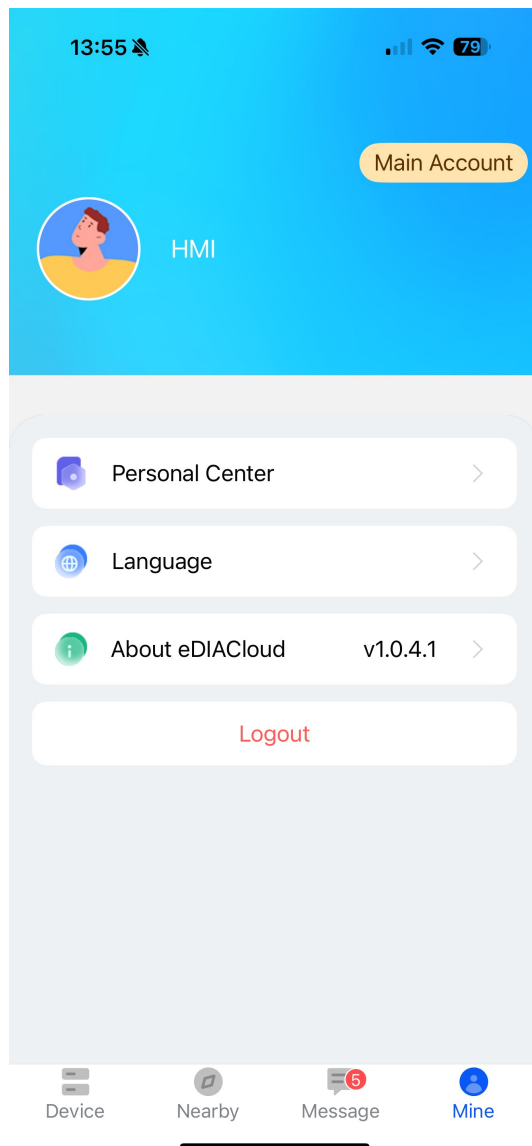

2.3.5.2 Notifications

View all system announcements.  
The system announcements include users invited to a team or remove from team.

### 2.3.6 Mine

This page displays the software version, allows you to modify the account password and interface language, and log out of the account.

- **Personal Center**

This page allows user to modify account information and password.

Description	Default
